

# SCAVENGER HUNT

## Home Sweet Habitat

Animals live just about everywhere on earth, from the depths of oceans to high mountains to the hair on your head! An animal's home is called its habitat, and it contains everything the animal needs to survive and reproduce. A species' habitat may be large or small, in trees or underground. Some animals need lots of space within their habitat to roam and find food, while others never leave their very small space.

### Find an animal at the Zoo that lives:

On land

In trees

Underground

In lakes and rivers

In deep oceans

In a desert

In a rainforest

On mountains

In grasslands

In your backyard or neighborhood

### Find an animal at the Zoo that:

Needs a large area

Needs a small area

Lives in groups or colonies

Lives alone

\*Make this activity more challenging by finding animals not pictured above.

**Something to Talk About.** What's in your personal habitat? What do you need to live comfortably? What is similar about your habitat and the Zoo animals habitats? What is different?

Complete this activity sheet and bring it to the Education Office, located in the Visitor Center, to receive a sticker!
